

5.1.11 Security

[Return to Requirements](#)

Proposals SHALL demonstrate that the specification proposed in response to this RFP can be made secure in environments that require security.

Submissions SHALL provide answers to the following questions:

- What security-sensitive elements, if any, does the proposal introduce
- Which accesses to security-sensitive elements should be subject to security policy control
- Does the proposed service or facility need to be security-aware
- What default policies, such as authentication, audit, authorization, and message protection, should be applied to the security-sensitive elements introduced by the proposal
- What security considerations should implementers of the proposal understand

OMG has adopted several specifications that address various security aspects and provide useful resources for formulating responses [SEC] [RAD].
