

1.4.2.2 Product Architectures

[Return to 1.4.2 Out of Scope](#)

Vendor-specific solutions, proprietary platforms, and product-level design decisions, including packaging, deployment topology, and vendor-specific configuration models, fall outside the scope of this [Reference Architecture](#).

FDIS-RA does not endorse, evaluate, certify, or constrain any particular product, platform, service, vendor, or commercial offering. The use of a particular product or platform does not, by itself, demonstrate alignment or conformance with FDIS-RA.

Product architectures may realize the architectural responsibilities, boundaries, interfaces, and governance mechanisms defined by FDIS-RA. Product-specific design and implementation decisions remain the responsibility of vendors, system architects, integrators, acquisition authorities, and implementing organizations.
