

MO-002 — Reduced Platform Deployment Timelines

[Go to Mission Objectives](#)

Original Requirement

Crucible SHALL reduce platform deployment timelines from months to days or hours through automation.[\[C2\]](#)

Assessment of Original Requirement

The Original Requirement preserves the approved mission objective but does not express independently testable normative statements.

The following Specification Discipline and Authoring findings apply:

- **Reduce** requires comparison with an identified and approved baseline, but the Original Requirement does not identify the baseline process, duration, scope, inputs, or measurement method
- **Platform deployment timelines** does not identify the starting event, completion event, measured activities, or measurement boundaries
- **From months** does not identify a specific baseline duration or a bounded range
- **To days or hours** provides alternative and unbounded target ranges rather than a single applicable [Acceptance Criterion](#)
- **Through automation** prescribes an implementation approach rather than stating only the required outcome
- The Original Requirement does not identify the applicable [Platform Deployment](#)
- The Original Requirement does not identify which Platform Deployment activities contribute to the measured [Deployment Duration](#)
- The Original Requirement does not identify how failed, incomplete, interrupted, or repeated deployments affect the measured result
- The Original Requirement combines an absolute duration objective, a relative duration-reduction objective, and an implementation approach within one compound normative statement
- The absolute duration objective and relative duration-reduction objective may pass or fail independently
- The Original Requirement does not provide independently identifiable statements for verification and traceability

The Original Requirement therefore requires decomposition into independently identifiable normative requirements.

The decomposition preserves MO-002 as the stable parent requirement identifier. Each replacement requirement receives a lettered identifier and a separate requirement page. The source page currently combines the maximum permitted duration and improvement over an approved

Deployment Baseline in one normalized Statement, so those outcomes also require separation.
:contentReference[oaicite:0]{index=0}

Proposed Statements

The Original Requirement is replaced by the following independently identifiable normative requirements:

- [MO-002a — Maximum Platform Deployment Duration](#)
- [MO-002b — Platform Deployment Duration Reduction](#)
