

C.2 Operational Requirements

[Go to Crucible Requirements](#)

The Operational Requirements define the actors, deployment environments, operational classifications, concurrency needs, and management scope within which [Crucible](#) operates.

These requirements establish the operational conditions that constrain and guide the functional, security, reliability, performance, maintainability, data management, and interoperability requirements.

Contents

- [OR-001 — Operation by Identified User Categories](#)
- [OR-002 — Deployment Environments](#)
- [OR-003 — Classified and Unclassified Environments](#)
- [OR-004 — Concurrent Environment Deployment and Management](#)
- [OR-005 — Distributed Environment Management](#)

Notes for Editors

The individual requirement pages should retain the stable identifiers OR-001 through OR-005.

The source statements should preserve the wording from the controlling System Requirements Specification.

Normalized statements should replace weak verbs such as **support** with direct, testable behavior.

Incoming traceability should use the wiki Backlinks function rather than a manually maintained list.

To reference the requirement Statement from another wiki page, insert:

```
{{section><namespace>#Statement&noheader&nofooter&noeditbtn}}
```

Replace <namespace> with the namespace of the requirement page to reference.

Do not rename requirement pages after an external citation unless a redirect or move plan is in place.
