

# FR-COMP-010b — Compliance Finding Association Preservation

[Go to FR-COMP-010 — Transferable Compliance Findings](#)

## Statement

[Crucible](#) SHALL preserve the association between each [Compliance Finding](#) and the [Artifact](#) to which the Compliance Finding applies when transferring them in a [Transfer Bundle](#) from a [Connected Environment](#) to a [Disconnected Environment](#).

## Derived From

This requirement derives from:

- [FR-COMP-010 — Transferable Compliance Findings](#)
- Crucible System Requirements Specification, Version 1.1 Draft, Functional Requirements, FR-COMP-010

The Original Requirement states:

*The system shall capture [compliance findings](#) into the transferable dependency/evidence bundle (see §4.10) so findings from connected build accompany artifacts into disconnected enclave.[C1]*

FR-COMP-010b:

- Replaces **The system** with the defined system name [Crucible](#)
- Changes **shall** to the established uppercase normative form **SHALL**
- Extracts preservation of the association between [Compliance Findings](#) and affected Artifacts as an independently verifiable requirement
- Replaces **transferable dependency/evidence bundle** with the controlled term [Transfer Bundle](#)
- Replaces **connected build** with the controlled term [Connected Environment](#)
- Replaces **disconnected enclave** with the controlled term [Disconnected Environment](#)
- Assigns inclusion of Compliance Findings and affected Artifacts in the same Transfer Bundle to FR-COMP-010a

## Rationale

A [Compliance Finding](#) remains useful after transfer only when its association with the evaluated [Artifact](#) remains identifiable.

Preserving this association enables actors and processes in a [Disconnected Environment](#) to determine

which [Compliance Findings](#) apply to each transferred Artifact.

FR-COMP-010a governs inclusion of Compliance Findings and affected Artifacts in the same [Transfer Bundle](#). This requirement governs preservation of the association between them.

This requirement does not require Crucible to:

- Generate [Compliance Findings](#)
- Validate Compliance Findings
- Resolve Compliance Findings
- Remediate affected Artifacts
- Reassess affected Artifacts
- Determine whether affected Artifacts comply with a Compliance Baseline

## Applies To

This requirement applies to:

- [Crucible](#)
- [Compliance Findings](#)
- [Artifacts](#)
- [Transfer Bundles](#)
- [Connected Environments](#)
- [Disconnected Environments](#)

## Verification

Verification confirms that:

1. An [Artifact](#) with one or more associated [Compliance Findings](#) is selected for testing
2. [Crucible](#) includes the selected Artifact and its associated Compliance Findings in a [Transfer Bundle](#)
3. Crucible transfers the Transfer Bundle from a [Connected Environment](#) to a [Disconnected Environment](#)
4. The transferred Artifact can be identified in the Disconnected Environment
5. Each transferred Compliance Finding can be identified in the Disconnected Environment
6. The association between each transferred Compliance Finding and the Artifact to which it applies can be determined in the Disconnected Environment

## Referenced By

The following pages reference this requirement:

- [5.4 Assess Compliance](#)
- [5.7 Preserve Evidence and Lifecycle Records](#)
- [6.1 Construct and Assess the Environment](#)

- [7.7 Preserve Traceability Across Environments](#)
- [8.5 Transfer Compliance Findings](#)
- [Annex D: Requirements Traceability](#)

## Implementation Status

Implemented and Verified

## Requirement Status

- ☐ Review and approve FR-COMP-010b as a leaf requirement.
- 

## Issues

- ☐ Confirm the controlled definition of Compliance Finding in the shared Terms and Definitions corpus.
  - ☐ Determine whether separate requirements define the identifier or reference mechanism used to preserve the association between a Compliance Finding and an Artifact.
  - ☐ Determine whether separate requirements govern verification of the preserved association after Transfer Bundle import.
- 

## Notes for Editors

This requirement page retains the derived requirement identifier FR-COMP-010b.

This page is a leaf requirement page and omits a trailing :start from its namespace.

The Statement addresses only preservation of the association between each [Compliance Finding](#) and the [Artifact](#) to which the Compliance Finding applies during transfer between Connected and Disconnected Environments.

FR-COMP-010a governs inclusion of Compliance Findings and affected Artifacts in the same [Transfer Bundle](#).

Use the following controlling Terms and Definitions entry for Compliance Finding:

- [Compliance Finding](#)

Do not add finding generation, validation, resolution, remediation, reassessment, identifier-format, or compliance-decision obligations unless the controlling requirement changes through an approved requirements process.
