

ENV-001c — Identify Included Test Objects

[Go to ENV-001 — Define Test Environment](#)

Statement

The [DIDO-TE](#) SHALL identify each [Test Object](#) included in a [Test Environment](#).

Derived From

- [\[DTE5\] DIDO-TE Requirements Register](#), source requirement identifier and obligation to be assigned
- [\[DTE6\] Structured Information Processing Reference Architecture \(SIP-RA\)](#)
- [\[DTE7\] Federated Data Interpretation Systems Reference Architecture \(FDIS-RA\)](#)

Rationale

Identifying the included [Test Objects](#) establishes which entities undergo evaluation within a [Test Environment](#).

The recorded composition supports confirmation that the Test Environment contains the Test Objects required by an applicable [Test Definition](#). It also supports [Traceability](#) from each Test Object to the applicable [Test Execution](#), [Test Result](#), and [Evidence](#).

Applies To

- [Test Environment](#)
- [Test Object](#)

Verification

Verification confirms that:

- Each Test Environment identifies every included Test Object.
- Each identified Test Object has an explicit relationship to the Test Environment.
- Each Test Object required by an applicable Test Definition appears among the identified Test Objects.
- An unidentified Test Object included in the Test Environment constitutes nonconformance with this requirement.

Verification includes:

- Inspection of the controlled information for each Test Environment
- Inspection of the Test Objects present in the Test Environment
- Comparison of the identified Test Objects with the Test Objects present in the Test Environment
- Comparison of the identified Test Objects with those required by each applicable Test Definition
- A negative assessment using a Test Environment containing an unidentified Test Object
- Confirmation that the negative assessment produces a nonconformance result
