

ENV-001j — Define Deployment Constraints

[Go to ENV-001 — Define Test Environment](#)

Statement

The [DIDO-TE](#) SHALL define each deployment [Constraint](#) applicable to a [Test Environment](#) or record that no deployment Constraint applies and provide the basis for the determination.

Derived From

- [\[DTE5\] DIDO-TE Requirements Register](#), source requirement identifier and obligation to be assigned
- [\[DTE6\] Structured Information Processing Reference Architecture \(SIP-RA\)](#)
- [\[DTE7\] Federated Data Interpretation Systems Reference Architecture \(FDIS-RA\)](#)

Rationale

Defining the applicable deployment [Constraints](#) establishes the conditions governing the placement, provisioning, installation, instantiation, and operation of a [Test Environment](#) on its [Deployment Target](#).

The defined Constraints support deployment planning, validation of the deployed Test Environment, reproduction of its deployment state, and assessment of whether a deployment difference influenced a [Test Execution](#) or [Test Result](#).

An explicit determination that no deployment Constraint applies distinguishes an intentional condition from missing information.

Applies To

- [Test Environment](#)
- [Constraint](#)
- [Deployment Target](#)
- [Node](#)
- [Test Object](#)
- [Test Resource](#)

Verification

Verification confirms that:

- Each Test Environment defines every applicable deployment Constraint.
- Each defined deployment Constraint identifies the element, operation, condition, or Deployment Target it governs.
- The deployed Test Environment satisfies each applicable deployment Constraint.
- A Test Environment without an applicable deployment Constraint records the determination and its basis.
- A missing, undefined, or unsatisfied applicable deployment Constraint constitutes nonconformance with this requirement.

Verification includes:

- Inspection of the controlled information for each Test Environment
- Inspection of the defined deployment Constraints
- Inspection of the deployed Test Environment and its Deployment Target
- Comparison of the observed deployment state with the defined deployment Constraints
- Inspection of recorded determinations that no deployment Constraint applies
- Inspection of the basis recorded for each such determination
- A negative assessment using a Test Environment that violates an applicable deployment Constraint
- Confirmation that the negative assessment produces a nonconformance result
