

ENV-001k — Define Version and Baseline Information

[Go to ENV-001 — Define Test Environment](#)

Statement

The [DIDO-TE](#) SHALL define the version and [Baseline](#) information for each element included in a [Test Environment](#).

Derived From

- [\[DTE5\] DIDO-TE Requirements Register](#), source requirement identifier and obligation to be assigned
- [\[DTE6\] Structured Information Processing Reference Architecture \(SIP-RA\)](#)
- [\[DTE7\] Federated Data Interpretation Systems Reference Architecture \(FDIS-RA\)](#)

Rationale

Defining version and [Baseline](#) information establishes the precise state of each element included in a [Test Environment](#).

The recorded information supports reproducible instantiation, comparison between Test Environments, controlled change, and evaluation of whether a version or Baseline difference influenced a [Test Execution](#) or [Test Result](#).

The information also preserves traceability between the Test Environment definition, its instantiated state, and the resulting [Evidence](#).

Applies To

- [Test Environment](#)
- [Baseline](#)
- [Test Definition](#)
- [Test Object](#)
- [Node](#)
- [Test Resource](#)
- [Configuration](#)

Verification

Verification confirms that:

- Each element included in a Test Environment has defined version information.
- Each element included in a Test Environment has an identified Baseline association.
- The defined version and Baseline information corresponds to the instantiated element.
- The Test Environment definition identifies the Baseline governing its complete composition and Configuration.
- Missing, undefined, or inconsistent version or Baseline information constitutes nonconformance with this requirement.

Verification includes:

- Inspection of the controlled information for each Test Environment
- Inspection of the version information for each included element
- Inspection of the Baseline associations for each included element
- Inspection of the Baseline governing the complete Test Environment
- Comparison of the defined version and Baseline information with the instantiated Test Environment
- A negative assessment using an element with missing or inconsistent version or Baseline information
- Confirmation that the negative assessment produces a nonconformance result
