

Audit Recording Role

[Go up to Terms and Definitions](#)

Discussion

The Audit Recording Role identifies responsibility for recording auditable information about FX logical interactions, decisions, state changes, information exchanges, releases, commands, acknowledgements, replay requests, and reconstruction results.

This role includes recording what happened, when it happened, which FX logical [Nodes](#) participated, which FX information structures were involved, which [endpoint](#) carried the information, which [Runtime Plane](#) framed the interaction, and which [evidence](#) expectations apply.

The Audit Recording Role participates primarily in the FX Logical [Audit and Provenance Plane](#). It supports all other planes by preserving reviewable records of their interactions.

Definition

responsible for recording auditable information about FX logical interactions, decisions, state changes, information exchanges, releases, commands, acknowledgements, replay requests, and reconstruction results

Source

Specialization of Logical Node Role from [Part 2: Distributed Node-Based Logical Architecture](#), Section 6.4, Logical Audit and Provenance Plane from [Part 2: Distributed Node-Based Logical Architecture](#), Section 9.6, [Evidence](#) from [Part 1: Conceptual Architecture](#), Section 7.9, and [Traceability](#) from [Part 1: Conceptual Architecture](#), Section 7.10; generalised from audit material in the original FX Demo [Reference Architecture](#).

Note

The Audit Recording Role is not merely logging. Logs contribute to the audit when later implementation and evidence layers preserve traceable records that support reconstruction, review, or evidence.

Example

The FX Audit and Provenance Node performs the Audit Recording Role by recording a release decision

and identifying the FX Policy Decision, FX Release Package, recipient context, timestamp, and obligations.
