

FX Release Package

[Go up to Terms and Definitions](#)

Discussion

An FX Release Package represents authorised FX information prepared for release to an External Oversight Participant.

The FX Release Package identifies released content, recipient context, release purpose, policy decision reference, redaction or transformation context, [obligations](#), source information references, producing FX logical [Node](#), release timestamp, and provenance reference.

The FX Release Package participates primarily in the FX Logical [Policy and Release Plane](#). It also supports the FX Logical [Audit and Provenance Plane](#) because released information requires [traceability](#) to policy decisions, source information, obligations, delivery context, and [evidence](#) expectations.

Definition

authorised FX information prepared for external release

Source

Specialisation of Logical Record from [Part 2: Distributed Node-Based Logical Architecture](#), Section 8.9, [Policy and Release Plane](#) from [Part 1: Conceptual Architecture](#), Section 8.5, and [Governance and Authority](#) from [Part 1: Conceptual Architecture](#), Section 9.6; generalised from the IEF release package and external oversight material in the original FX Demo [Reference Architecture](#).

Note

An FX Release Package is not a file archive, an API response, a secure message, a report, a DDS sample, a data extract, a dashboard view, or a delivery mechanism.

Example

An FX Release Package contains an authorised, redacted view of selected FX transactions, validation, contract state, and cash-flow information for an External Oversight Participant.
