

Google Cloud Platform

[Go up to Terms and Definitions](#)

Discussion

Google Cloud Platform is a commercial cloud computing platform that provides computing, storage, networking, database, security, management, application, data-processing, and related technology services through Google-operated infrastructure.

Google Cloud Platform commonly uses the abbreviation **GCP**. Google also uses **Google Cloud** as the broader product and service brand.

Within Crucible, Google Cloud Platform can serve as a [Deployment Platform](#) on which Crucible creates and manages Infrastructure Environments.

Google Cloud Platform provides proprietary service interfaces, resource models, identity mechanisms, configuration formats, and operational services. A Crucible Provider Implementation can isolate those provider-specific dependencies from provider-independent Crucible Descriptions and Infrastructure Baselines.

Definition

commercial cloud computing platform provided by Google LLC

Note

The abbreviation **GCP** refers to Google Cloud Platform.

Google Cloud Platform identifies a named Cloud Provider and Deployment Platform. The term does not identify a specific Google Cloud service, organization, folder, project, region, zone, or deployed Infrastructure Environment.

Example

A Crucible Provider Implementation translates a provider-independent Infrastructure Baseline into

Google Cloud resources, including virtual private clouds, compute instances, storage resources, service accounts, and security controls.
