

Quality of Service (QoS)

[Go up to Terms and Definitions](#)

Discussion

Quality of Service (QoS) is a general term that can mean different things at different architectural layers.

In this document set, use the DDS-specific term for middleware quality-of-service policies.

Definition

see [DDS Quality of Service \(DDS QoS\)](#)

Source

See [DDS Quality of Service \(DDS QoS\)](#).

Note

This entry redirects general QoS usage to the DDS-specific glossary entry used by the FX Demo implementation profile.

Example

For DDS implementation mappings, use [DDS Quality of Service \(DDS QoS\)](#) rather than the generic QoS term.
