

RDF Graph

[Go up to Terms and Definitions](#)

Discussion

An RDF graph represents information as a set of [RDF triples](#). Each RDF triple contains a subject, predicate, and object. Together, the triples describe resources, properties, values, and relationships.

An RDF graph provides the graph structure used by [RDF](#). The graph structure emerges from shared subjects, predicates, and objects across RDF triples.

An RDF graph supports semantic work when its triples use governed identifiers, controlled vocabularies, defined predicates, and traceable domain meanings. The graph structure alone does not establish the full meaning of a domain.

An RDF graph differs from [ontology](#), [OWL](#), and [semantics](#). An RDF graph provides a representation structure. Ontologies, vocabularies, schemas, rules, applications, and domain models provide additional semantic commitments.

Definition

set of RDF triples that represents information about resources, properties, values, and relationships

Source

W3C RDF 1.1 Concepts and Abstract Syntax; specialised for use in the FX Demo Reference Architecture.

Note

An RDF graph contains [RDF triples](#). An RDF dataset organises one default RDF graph and zero or more named RDF graphs.

Example

An RDF graph represents multiple statements about an FX trade by using multiple RDF triples.

Subject	Predicate	Object
Trade-123	hasCounterparty	LEI-5493001KJTIIGC8Y1R12

Subject	Predicate	Object
Trade-123	hasCurrencyPair	EUR/USD
Trade-123	hasNotionalAmount	1000000
Trade-123	hasTradeDate	2026-07-07
Trade-123	hasSettlementDate	2026-07-09
Trade-123	hasLifecycleState	Confirmed
Trade-123	wasValidatedBy	Validator-Structural-01

The same RDF graph appears in Turtle-like notation as follows:

```
:Trade-123 :hasCounterparty :LEI-5493001KJTIIGC8Y1R12 .
:Trade-123 :hasCurrencyPair "EUR/USD" .
:Trade-123 :hasNotionalAmount "1000000"^^xsd:decimal .
:Trade-123 :hasTradeDate "2026-07-07"^^xsd:date .
:Trade-123 :hasSettlementDate "2026-07-09"^^xsd:date .
:Trade-123 :hasLifecycleState :Confirmed .
:Trade-123 :wasValidatedBy :Validator-Structural-01 .
```

Each line is one RDF triple. The set of triples forms an RDF graph about Trade-123.
