

Release Control Role

[Go up to Terms and Definitions](#)

Discussion

The Release Control Role identifies responsibility for preparing and controlling the authorized release of FX information.

This role includes applying policy decisions, selecting authorized information, applying required redaction or transformation, recording obligations, preparing FX Release Packages, and preserving release provenance.

The Release Control Role participates primarily in the FX Logical [Policy and Release Plane](#). It also supports the FX Logical [Audit and Provenance Plane](#) when release records preserve policy decision references, released information, recipient context, obligations, timestamp, and [evidence](#) expectations.

Definition

responsible for preparing and controlling the authorized release of FX information

Source

Specialization of Logical Node Role from [Part 2: Distributed Node-Based Logical Architecture](#), Section 6.4, Logical Policy Constraints from [Part 2: Distributed Node-Based Logical Architecture](#), Section 11.7, and [Policy and Release Plane](#) from [Part 1: Conceptual Architecture](#), Section 8.5; generalised from IEF release-control, redaction, transformation, obligation, and release-package material in the original FX Demo [Reference Architecture](#).

Note

The Release Control Role does not prescribe a release service, redaction engine, transformation engine, gateway, API, file package, protocol, or delivery mechanism.

Example

The FX Policy and Release Node performs the Release Control Role when it prepares an FX Release Package for an authorized External Oversight Participant.
