

P1-REQ-13-10-005

[Return to Part 1 Requirements](#)

Statement

A later part SHALL NOT use a deployment decision to redefine a conceptual element.

Source

Part 1, Section 13.10: Profile and Layering Requirements.

Rationale

Deployment decisions belong to operational realization. They describe where, how, and under which conditions implementation artifacts execute, connect, scale, observe, secure, or recover. Deployment decisions do not define conceptual architecture meaning.

This requirement prevents deployment arrangements from altering conceptual elements inherited from Part 1. It preserves conceptual stability across local development, test, regulated production, sovereign infrastructure, and restricted environments.

Applies To

This requirement applies to later parts that introduce or use deployment decisions.

It applies specifically to deployment decisions involving:

- Runtime environments
- Container placement
- Orchestration
- Network topology
- Security zones
- Configuration
- Operational dashboards
- Infrastructure profiles

Verification

Verification SHALL confirm that later parts do not use deployment decisions to redefine conceptual

elements.

Verification activities include review checks confirming that:

- Deployment decisions appear as deployment concerns
- Conceptual elements retain Part 1 definitions
- Deployment artifacts trace to the implementation artifacts they deploy or configure
- Environment-specific arrangements do not replace conceptual definitions
