

P1-REQ-13-3-002

[Return to Part 1 Requirements](#)

Statement

The Conceptual Architecture SHALL use [Classification Paths](#) to identify governed business and [Semantic](#) scope.

Source

Part 1, Section 13.3: Classification Requirements.

Rationale

Classification Paths identify the governed scope represented by a classification. They provide a stable way to express business and semantic scope without relying on runtime, deployment, repository, or implementation identifiers.

Using Classification Paths supports consistent interpretation across documents, profiles, systems, and governed communities.

Applies To

This requirement applies to the use of Classification Paths within the Conceptual Architecture.

It applies specifically to:

- Governed business scope
- Semantic scope
- Classification references
- Profile inheritance
- Cross-document traceability

Verification

Verification SHALL confirm that the Conceptual Architecture uses Classification Paths to identify governed business and semantic scope.

Verification activities include review checks confirming that:

- Classification Paths identify governed business scope
- Classification Paths identify semantic scope
- Classification Paths do not substitute for runtime identifiers
- Classification Paths support traceability across later profiles
