

P1-REQ-13-6-006

[Return to Part 1 Requirements](#)

Statement

The Conceptual Architecture SHALL distinguish [Traceability](#) from [Evidence](#).

Source

Part 1, Section 13.6: Separation of Concerns Requirements.

Rationale

Traceability identifies relationships among architectural, logical, implementation, deployment, and evidence elements. Evidence identifies recorded information that supports a claim. The two concerns work together, but they serve different architectural purposes.

This requirement prevents a trace link from being treated as evidence and prevents evidence records from being treated as the relationship model that connects architectural concerns.

Applies To

This requirement applies to Traceability and Evidence references within the Conceptual Architecture.

It applies specifically to:

- Trace links
- Evidence records
- Supported claims
- Cross-level relationships
- Verification material

Verification

Verification SHALL confirm that the Conceptual Architecture distinguishes Traceability from Evidence.

Verification activities include review checks confirming that:

- Traceability references identify relationships
- Evidence references identify recorded information supporting claims

- Trace links do not replace evidence records
- Evidence records do not replace traceability relationships

Traceability
