

P2-REQ-16-3-001

[Return to Requirements](#)

Statement

The Logical Architecture / PIM SHALL define [Logical Node](#), [Logical Node Identity](#), [Logical Node Role](#), [Logical Node Responsibility](#), [Logical Node Boundary](#), [Logical Node Collaboration](#), and [Logical Node Lifecycle State](#).

Source

Part 2, Section 16.3: Logical Node Requirements.

Rationale

The Logical Node Model provides the primary organisational structure for the Logical Architecture / PIM. Defining the Logical Node and its associated concepts establishes a consistent foundation for assigning responsibilities, identifying participants, modelling collaboration, and supporting governance and traceability throughout the logical architecture.

Without these concepts, different Domain Logical Profiles and Implementation Profiles could interpret logical participants inconsistently, reducing interoperability, reviewability, and architectural consistency.

Applies To

This requirement applies to the definition, review, maintenance, interpretation, and specialisation of the Logical Node Model.

It applies specifically to:

- Logical Nodes;
- Logical Node Identities;
- Logical Node Roles;
- Logical Node Responsibilities;
- Logical Node Boundaries;
- Logical Node Collaboration; and
- Logical Node Lifecycle States.

Verification

Verification SHALL confirm that the Logical Architecture / PIM defines each required Logical Node concept.

Verification activities should include review checks confirming that:

- each Logical Node concept is explicitly defined;
- the definitions are consistent with the Part 1 Conceptual Architecture;
- the concepts collectively support logical modelling and governance; and
- the Logical Node Model provides a complete basis for later Domain Logical Profiles and Implementation Profiles.

Traceability

This requirement supports traceability from the Part 1 conceptual Node to the Logical Node Model defined by Part 2.
