

P2-REQ-16-8-001

[Return to Requirements](#)

Statement

The Logical Architecture / PIM SHALL define a Logical Governance Model.

Source

Part 2, Section 16.8: Logical Governance Requirements.

Rationale

The Logical Governance Model establishes the platform-independent framework for governing logical definitions, relationships, responsibilities, compatibility, and change. Defining a Logical Governance Model ensures that governance responsibilities remain consistent across Domain Logical Profiles, Implementation Profiles, and later lifecycle activities without depending on specific governance technologies or organizational processes.

Applies To

This requirement applies to the Logical Governance Model.

It applies specifically to:

- Logical Governance Model;
- Logical Architecture / PIM;
- Domain Logical Profiles; and
- Implementation Profiles.

Verification

Verification SHALL confirm that the Logical Architecture / PIM defines a Logical Governance Model.

Verification activities should include review checks confirming that:

- a Logical Governance Model is explicitly defined;
- governance responsibilities are identified;
- the model remains platform independent; and
- later profiles preserve the Logical Governance Model.

Traceability

This requirement supports traceability between the Logical Governance Model, the Logical Architecture, and later governance activities.
