

P2-REQ-16-8-002

[Return to Requirements](#)

Statement

The Logical Governance Model SHALL define Logical Ownership of Definitions, Logical Versioning, [Logical Compatibility](#), Logical Change Control, Logical Admission Rules, and [Logical Policy Constraints](#).

Source

Part 2, Section 16.8: Logical Governance Requirements.

Rationale

The Logical Governance Model is composed of complementary governance capabilities that collectively preserve the integrity, consistency, and evolution of the Logical Architecture. Defining these governance elements establishes a common framework for ownership, compatibility, change management, admission, and policy across all logical elements.

Applies To

This requirement applies to the Logical Governance Model.

It applies specifically to:

- Logical Ownership of Definitions;
- Logical Versioning;
- Logical Compatibility;
- Logical Change Control;
- Logical Admission Rules; and
- Logical Policy Constraints.

Verification

Verification SHALL confirm that the Logical Governance Model defines each required governance capability.

Verification activities should include review checks confirming that:

- each governance capability is explicitly defined;

- governance responsibilities are complete;
- governance capabilities remain platform independent; and
- later profiles preserve the Logical Governance Model.

Traceability

This requirement supports traceability between the Logical Governance Model and its constituent governance capabilities.
