

P2-REQ-16-9-001

[Return to Requirements](#)

Statement

The Logical Architecture / PIM SHALL define a Logical Traceability Model.

Source

Part 2, Section 16.9: Logical Traceability Requirements.

Rationale

The Logical Traceability Model establishes the platform-independent relationships that connect logical architectural elements to their conceptual origins and to later implementation, deployment, testing, and evidence artefacts. Defining a Logical Traceability Model ensures that architectural intent remains understandable, reviewable, and governable throughout the architecture lifecycle.

Applies To

This requirement applies to the Logical Traceability Model.

It applies specifically to:

- Logical Traceability Model;
- Logical Architecture / PIM;
- Domain Logical Profiles; and
- Implementation Profiles.

Verification

Verification SHALL confirm that the Logical Architecture / PIM defines a Logical Traceability Model.

Verification activities should include review checks confirming that:

- a Logical Traceability Model is explicitly defined;
- traceability relationships are identified;
- the model remains platform independent; and
- later profiles preserve the Logical Traceability Model.

Traceability

This requirement supports traceability between the Logical Architecture, its conceptual foundations, and later implementation and deployment artefacts.
