

P3-REQ-17-10-007

[Return to Requirements](#)

Statement

FX Logical Admission Rules SHALL define conditions governing participation of FX logical elements in the FX Demo Logical Profile.

Source

Part 3, Section 17.10: FX Logical Governance Requirements.

Rationale

Not every logical element is automatically eligible for inclusion within the FX Demo Logical Profile. Logical Admission Rules establish the architectural criteria that govern whether logical definitions, relationships, interaction patterns, lifecycle elements, and other architectural components may participate in the profile. Defining these conditions preserves consistency, governance, interoperability, and traceability while remaining independent of implementation technologies and organizational approval processes.

Maintaining admission rules as logical architectural concepts enables multiple Implementation Profiles to apply consistent governance principles while using different operational procedures.

Applies To

This requirement applies to all logical elements considered for participation in the FX Demo Logical Profile.

It applies specifically to:

- logical admission;
- architectural governance;
- profile conformance;
- governance reviews; and
- derived Implementation Profiles.

Verification

Verification SHALL confirm that conditions governing participation of FX logical elements are explicitly defined.

Verification activities should include review checks confirming that:

- admission conditions are identified;
- participation criteria are consistently applied;
- admission decisions preserve architectural integrity; and
- implementation-specific approval systems are not prescribed.

Traceability

This requirement establishes logical admission governance within the FX Logical Governance Model.
