

P4-REQ-21-12-006

[Return to Requirements](#)

Statement

Each approved script SHALL identify its logging behavior.

Source

Part 4, Section 21.12: Script and Execution Requirements.

Rationale

Script logging provides observable information about invocation, activity, outcome, warnings, failures, and cleanup.

Defining logging behavior allows script execution to be reviewed consistently and supports troubleshooting, operational review, and later evidence planning.

Applies To

This requirement applies to:

- approved scripts;
- script invocation logging;
- script task logging;
- warning and failure logging; and
- cleanup reporting.

Verification

Verification SHALL confirm that each approved script identifies its logging behavior.

Verification activities should include review checks confirming that:

- invocation information is logged where required;
- performed tasks are identifiable;
- outcomes are reported;
- warnings and errors are reported; and
- logging follows the Developer Handbook.

Traceability

This requirement connects script execution to the Phase 0 logging conventions defined by the Developer Handbook.
