

P4-REQ-21-13-001

[Return to Requirements](#)

Statement

The Phase 0 Implementation Profile / PSM SHALL define an Implementation Governance Model.

Source

Part 4, Section 21.13: Implementation Governance Requirements.

Rationale

A defined Implementation Governance Model establishes how Phase 0 implementation artifacts are owned, versioned, reviewed, changed, generated, and accepted into the implementation baseline.

The model protects the relationship between the FX Demo Logical Profile and its Phase 0 implementation realizations by preventing uncontrolled implementation changes from altering logical meaning.

Applies To

This requirement applies to:

- Phase 0 implementation artifacts;
- implementation mappings;
- generated artifacts;
- configuration artifacts;
- scripts; and
- repository and review activities.

Verification

Verification SHALL confirm that the Phase 0 Implementation Profile / PSM defines an Implementation Governance Model.

Verification activities should include review checks confirming that:

- implementation ownership is addressed;
- versioning and compatibility are addressed;

- change control is addressed;
- generated-artifact and repository governance are addressed; and
- Developer Handbook governance is addressed.

Traceability

This requirement establishes the governance framework for the Phase 0 implementation baseline.
