

P4-REQ-21-13-012

[Return to Requirements](#)

Statement

Implementation governance SHALL NOT replace Part 3 logical governance.

Source

Part 4, Section 21.13: Implementation Governance Requirements.

Rationale

Part 3 governs the FX Demo Logical Profile, while Part 4 governs Phase 0 implementation artifacts and implementation mappings.

Keeping these governance responsibilities separate prevents implementation-level review, ownership, versioning, or change control from redefining logical architectural meaning.

Applies To

This requirement applies to:

- implementation ownership;
- implementation versioning;
- implementation compatibility;
- implementation change control;
- generated artifact governance;
- repository governance; and
- Developer Handbook governance.

Verification

Verification SHALL confirm that Phase 0 implementation governance does not replace or override Part 3 logical governance.

Verification activities should include review checks confirming that:

- logical definitions remain governed by Part 3;
- logical ownership remains governed by Part 3;

- logical change control remains governed by Part 3;
- implementation governance remains limited to Part 4 implementation concerns; and
- changes to logical meaning are not introduced through implementation governance.

Traceability

This requirement preserves the governance boundary between the Part 3 FX Demo Logical Profile and the Part 4 Phase 0 Implementation Profile / PSM.
