

P4-REQ-21-15-001

[Return to Requirements](#)

Statement

The Phase 0 Implementation Profile / PSM SHALL identify implementation artifacts prepared for Part 5 deployment, testability, operation, observation, and evidence planning.

Source

Part 4, Section 21.15: Part 5 Handoff Requirements.

Rationale

Part 5 depends on a controlled set of implementation artifacts produced and governed by Part 4.

Explicitly identifying those artifacts establishes a clear boundary between defining the Phase 0 implementation baseline and using that baseline for deployment, testability, operation, observation, and evidence planning.

Applies To

This requirement applies to:

- Phase 0 implementation artifacts;
- implementation mappings;
- configuration artifacts;
- scripts;
- repository artifacts; and
- implementation traceability records.

Verification

Verification SHALL confirm that the Phase 0 Implementation Profile / PSM identifies the implementation artifacts prepared for Part 5.

Verification activities should include review checks confirming that:

- deployment-relevant artifacts are identified;
- testability-relevant artifacts are identified;

- observation and operation inputs are identified;
- evidence-planning inputs are identified; and
- the handoff remains limited to the approved Phase 0 implementation baseline.

Traceability

This requirement establishes the controlled implementation baseline that Part 4 provides to Part 5.
