

P4-REQ-21-15-007

[Return to Requirements](#)

Statement

The Part 5 handoff SHALL identify interaction pattern realization.

Source

Part 4, Section 21.15: Part 5 Handoff Requirements.

Rationale

Part 5 uses the implementation flows defined by Part 4 to construct demonstrations, tests, observation procedures, and evidence collection.

Including interaction pattern realization in the handoff ensures that Part 5 exercises governed Phase 0 implementation flows rather than inventing new logical interactions.

Applies To

This requirement applies to:

- Phase 0 interaction realizations;
- implementation participants;
- DDS exchanges;
- processing outcomes;
- supporting scripts and configuration; and
- applicable audit and provenance expectations.

Verification

Verification SHALL confirm that the Part 5 handoff identifies applicable interaction pattern realizations.

Verification activities should include review checks confirming that:

- interaction implementations are identified;
- participating artifacts are identifiable;
- applicable DDS Topics and representations are identifiable; and

- interaction traceability to Part 3 is preserved.

Traceability

This requirement carries the Part 4 interaction realization mappings into Part 5 testability and execution planning.
