

P4-REQ-21-15-014

[Return to Requirements](#)

Statement

Part 5 SHALL NOT redefine the Phase 0 implementation artifacts defined by Part 4.

Source

Part 4, Section 21.15: Part 5 Handoff Requirements.

Rationale

Part 5 deploys, tests, observes, operates, and evidences the Phase 0 implementation artifacts defined by Part 4. It does not become a second source of implementation-profile definitions.

Preventing Part 5 from redefining Part 4 artifacts preserves a clear authority boundary and ensures that implementation changes remain subject to Part 4 implementation governance.

Applies To

This requirement applies to:

- implementation node mappings;
- DDS Topic mappings;
- IDL and generated type mappings;
- QoS profile mappings;
- Runtime Plane realizations;
- interaction realizations;
- repository and script models; and
- other Phase 0 implementation artifacts.

Verification

Verification SHALL confirm that Part 5 uses rather than redefines the Phase 0 implementation artifacts defined by Part 4.

Verification activities should include review checks confirming that:

- implementation definitions remain governed by Part 4;

- Part 5 deployment choices do not alter implementation mappings;
- Part 5 tests and evidence do not create replacement implementation definitions;
- implementation changes discovered during Part 5 activities return through Part 4 governance; and
- Part 5 records preserve the applicable Part 4 baseline identity.

Traceability

This requirement preserves the authority boundary between Part 4 implementation definition and Part 5 deployment, testability, operation, observation, and evidence activities.
