

P4-REQ-21-2-001

[Return to Requirements](#)

Statement

The Phase 0 Implementation Profile / PSM SHALL define a phase-specific implementation baseline for the FX Demo.

Source

Part 4, Section 21.2: Phase 0 Profile Requirements.

Rationale

A phase-specific implementation baseline establishes the controlled scope of implementation work for Phase 0. It identifies the implementation context to which Phase 0 artefacts, mappings, conventions, governance, and traceability apply.

Without a defined Phase 0 baseline, implementation artefacts could be introduced without a clear relationship to the selected development phase or the architectural elements they realise.

Applies To

This requirement applies to:

- the Phase 0 Implementation Profile / PSM;
- Phase 0 implementation artefacts;
- Phase 0 implementation mappings; and
- Phase 0 implementation governance and traceability.

Verification

Verification SHALL confirm that the Phase 0 Implementation Profile / PSM explicitly defines a phase-specific implementation baseline for the FX Demo.

Verification activities should include review checks confirming that:

- the Phase 0 implementation scope is identified;
- baseline implementation artefacts are distinguishable from non-baseline material;
- the baseline is governed by Part 4; and

- later-phase implementation capabilities are not implicitly included in the Phase 0 baseline.

Traceability

This requirement establishes the implementation baseline to which the remaining Phase 0 implementation requirements and mappings apply.
