

P4-REQ-21-2-007

[Return to Requirements](#)

Statement

The Phase 0 Implementation Profile / PSM SHALL NOT define the final implementation architecture for all later development phases.

Source

Part 4, Section 21.2: Phase 0 Profile Requirements.

Rationale

Phase 0 establishes a phase-specific implementation baseline rather than a permanent implementation architecture. Later development phases may introduce additional capabilities, technologies, mappings, governance mechanisms, or implementation patterns.

Restricting Phase 0 to its selected scope prevents current implementation decisions from unnecessarily constraining later development phases.

Applies To

This requirement applies to:

- the scope of the Phase 0 Implementation Profile / PSM;
- Phase 0 implementation mappings;
- Phase 0 technology selections;
- Phase 0 implementation constraints; and
- planning for later implementation profiles.

Verification

Verification SHALL confirm that the Phase 0 Implementation Profile / PSM does not claim to define the final implementation architecture for all later development phases.

Verification activities should include review checks confirming that:

- Phase 0 implementation choices are identified as phase-specific;
- later-phase capabilities are not treated as mandatory Phase 0 capabilities;

- the profile permits controlled evolution through later implementation profiles; and
- Phase 0 does not preclude compatible later-phase extensions.

Traceability

This requirement establishes the boundary between the Phase 0 implementation baseline and later implementation profiles.
