

P4-REQ-21-8-010

[Return to Requirements](#)

Statement

Each interaction realization SHALL identify the supporting scripts or configuration artifacts where applicable.

Source

Part 4, Section 21.8: Interaction Pattern Realization Requirements.

Rationale

Some Phase 0 interactions depend on scripts or configuration artifacts to prepare, start, coordinate, or configure the implementation participants involved.

Identifying these supporting artifacts makes implementation dependencies explicit while preserving the distinction between supporting automation and the logical interaction itself.

Applies To

This requirement applies to:

- interaction realizations;
- startup or execution scripts;
- configuration artifacts;
- DDS and QoS configuration; and
- supporting repository artifacts.

Verification

Verification SHALL confirm that applicable interaction realizations identify supporting scripts and configuration artifacts.

Verification activities should include review checks confirming that:

- required scripts are identified;
- required configuration artifacts are identified;
- supporting artifacts follow the Developer Handbook and repository workflow; and

- scripts and configuration do not redefine the logical interaction pattern.

Traceability

This requirement connects Phase 0 interaction realizations to the supporting implementation artifacts needed for repeatable execution.
