

4.4 Logical Meaning Before Physical Realisation

[Go to Top](#)

The architecture defines logical meaning before physical realisation.

A [Node](#) has a [Node Role](#) and [Node Identity](#) before an implementation profile decides whether it runs as a process, container, pod, virtual machine, or service. A [Runtime Plane](#) serves an architectural purpose, while an implementation profile decides whether to represent it through topic naming, DDS partitions, Kubernetes namespaces, network segmentation, or security policy.
