

5.6 Classification Values and Runtime Identifiers

[Go to Top](#)

Classification values do not act as runtime identifiers.

They identify governed business and **Semantic** scope. They do not identify runtime communication **Domains**, deployment namespaces, containers, pods, processes, repositories, files, or executable artifacts.

Authors and implementers must not treat classification values as substitutes for:

- DDS Domain IDs
- DDS partitions
- Kubernetes namespaces
- Container names
- Pod names
- Process identifiers
- Topic names
- **Node Identities**
- Repository paths
- Deployment profile names

Later parts may include classification values in metadata, documentation, configuration, **Evidence**, or naming conventions for readability and **Traceability**. Those uses do not turn classification values into runtime identifiers.
