

11.2 Conceptual Elements Remain Distinct

[Go to Top](#)

The Financial Systems Archetype keeps core conceptual elements distinct.

A [Node](#) is not a [Node Role](#). A [Node Identity](#) is not a container name. A [Communication Endpoint](#) is not the [Data Structure Instance](#) it carries. A [Data Structure Definition](#) is not a [Data Structure Instance](#). A [Runtime Plane](#) is not a DDS Domain, DDS partition, Kubernetes namespace, or network segment.

Maintaining these distinctions allows later parts to map concepts to technologies without losing the conceptual meaning.
