

11.4 Classification Values Do Not Define Runtime Boundaries

[Go to Top](#)

Classification values identify governed business and semantic scope. They do not define runtime communication boundaries, deployment boundaries, security zones, repository paths, or executable artefacts.

For example, the classification path:

```
Finance Ecosphere
└─ Monetary Ecosystem
   └─ Foreign Exchange Domain
```

identifies the inherited business and semantic scope of the FX Demo. It does not define a DDS Domain ID, Kubernetes namespace, container name, topic namespace, or deployment profile.
