

11.9 Traceability Preserves Layering

[Go to Top](#)

Traceability connects conceptual elements, logical elements, implementation artefacts, deployment artefacts, and evidence. It allows reviewers to understand how a concern moves through the document set without allowing later layers to redefine earlier layers.

A logical element traces to a conceptual element. An implementation artefact traces to a logical element. A deployment artefact traces to an implementation artefact. Evidence traces to the claim, behaviour, artefact, or condition it supports.
