

12.4 Logical Architecture Remains Platform Independent

[Go to Top](#)

The [Logical Architecture](#) / [PIM](#) remains independent of implementation technologies.

Part 2 may identify logical interactions, message flows, roles, responsibilities, state relationships, validation responsibilities, policy interactions, audit relationships, and [Traceability](#) relationships. It does not bind those logical elements to DDS Topics, IDL structures, QoS profiles, Python processes, container images, Kubernetes objects, Crucible scenarios, or [Evidence](#) bundles.

Those mappings belong to later parts.
