

12.5 Logical Architecture Supports Domain Profiles

[Go to Top](#)

Part 2 provides the reusable logical foundation for [Domain](#) profiles.

A [Domain](#) profile, such as the FX Demo Logical Profile, specializes the [Logical Architecture](#) / [PIM](#) for a specific financial [Domain](#). The [Domain](#) profile inherits the conceptual definitions from Part 1 and the platform-independent logical relationships from Part 2.

By inheriting conceptual definitions from Part 1 and logical relationships from Part 2, each [Domain](#) profile allows the [Financial Systems](#) Archetype to support multiple financial [Domains](#) without rewriting the conceptual foundation or the [Logical Model](#).
