

13.3 Domain Profile Additions

Go To Top

A Domain Logical Profile adds domain-specific logical detail while preserving the conceptual definitions from Part 1 and the distributed, node-based Logical Architecture defined in this part.

Domain-specific additions include:

- [Logical Nodes](#)
- [Logical Node Roles](#)
- Logical Node Responsibilities
- [Logical Communication Endpoints](#)
- [Logical Data Structure Definitions](#)
- [Logical Data Structure Instances](#)
- Lifecycle states
- Validation, interpretation, attestation, or [policy](#) responsibilities
- Interaction patterns
- Runtime Plane participation rules
- Governance and [compatibility](#) constraints
- [Traceability](#) and [Evidence](#) expectations

A Domain Logical Profile identifies which logical elements it inherits unchanged from this part and which logical elements it specialises for the Domain.
