

14.2 Logical Elements Prepared for Technology Mapping

[Go To Top](#)

The Logical Architecture / PIM prepares logical elements for later technology mapping.

An Implementation Profile / PSM maps logical elements such as:

- [Logical Nodes](#)
- [Logical Node Identities](#)
- [Logical Node Roles](#)
- [Logical Communication Endpoints](#)
- [Communication Roles](#)
- [Logical Data Structure Definitions](#)
- [Logical Data Structure Instances](#)
- Logical Runtime Planes
- Logical Interaction Patterns
- Logical Governance relationships
- Logical Traceability relationships

The implementation profile identifies the selected technology or artifact for each mapping and preserves [Traceability](#) to the logical element that the artifact realizes.
