

14.3 Communication Technology Independence

[Go To Top](#)

The Logical Architecture / PIM does not prescribe a communication technology.

An Implementation Profile / PSM selects communication mechanisms to realise [Logical Communication Endpoints](#) and logical interaction patterns. Those mechanisms include, for example, DDS, REST, RPC, Protocol Buffers-based services, message queues, event streams, file exchange, shared services, or other communication approaches.

The selected communication mechanism realises the logical endpoint. It does not redefine the [Logical Communication Endpoint](#), [Communication Role](#), Logical Runtime Plane, or logical interaction pattern.
