

14.7 Relationship to Phase 0 Implementation Profile

[Go To Top](#)

The Phase 0 Implementation Profile / PSM provides one implementation profile for this Logical Architecture / PIM.

The Phase 0 Implementation Profile maps selected logical elements to Phase 0 implementation technologies and artifacts. It identifies the selected communication technology, data representation mechanism, implementation language, runtime packaging approach, configuration artifacts, and generated artifacts used for Phase 0.

The Phase 0 Implementation Profile belongs in Part 4. It does not belong in this part because Part 2 defines the reusable, platform-independent Logical Architecture / PIM that implementation profiles map to selected technologies.
