

Part 2: Distributed Node-Based Logical Architecture

[Go to The FX Demo Root](#)

Financial Systems Archetype

Foreign Exchange (FX) Demo

Abstract

Part 2 defines the platform-independent logical architecture for the Financial Systems Archetype. It describes the logical nodes, runtime planes, information flows, responsibilities, and separation-of-concerns rules that apply before any specific technology stack is introduced into the architecture. Part 2 introduces the logical model that implementation profiles map onto selected platforms, products, protocols, and deployment environments. It serves as the primary bridge between the conceptual architecture in Part 1 and the technology-specific implementation profiles in later parts.

Contents

- [Foreword](#)
- [Introduction](#)
- [1. Scope](#)
- [2. Relationship to Part 0 and Part 1](#)
- [3. Traceability to Parent and Source Architectures](#)
- [4. Logical Architecture Principles](#)
- [5. Logical Architecture Overview](#)
- [6. Logical Node Model](#)
- [7. Logical Communication Model](#)
- [8. Logical Information Model](#)
- [9. Logical Runtime Plane Model](#)

- [10. Logical Interaction Patterns](#)
- [11. Logical Governance Model](#)
- [12. Logical Traceability Model](#)
- [13. Relationship to Domain Logical Profiles](#)
- [14. Relationship to Implementation Profiles / PSM](#)
- [15. Logical Rules and Constraints](#)
- [16. Logical Requirements](#)

Notes for Editors

This document should be maintained as a set of linked wiki pages rather than a single monolithic page. Each major section should have its own stable URI so it can be referenced from other wiki pages, exported documents, presentations, AI-assisted tools, and semantic models.

Do not rename pages once they have been cited externally unless a redirect or move plan is in place.
