

4.1 Domain Specialisation without Conceptual Redefinition

[Go To FX Demo Logical Profile Principles](#)

The FX Demo Logical Profile specialises the inherited concepts and logical elements for the [Foreign Exchange Domain](#). It does not redefine the conceptual architecture in Part 1 or the distributed, node-based [Logical Architecture/PIM](#) in Part 2.

FX logical [Nodes](#) specialise [Logical Nodes](#). FX logical [Communication Endpoints](#) specialise [Logical Communication Endpoints](#). FX logical information structures specialise [Logical Data Structure Definitions](#) and [Logical Data Structure Instances](#). FX [Runtime Plane](#) participation specialises the [Logical Runtime Plane Model](#).

This principle preserves the layered architecture. Part 3 adds FX-specific logical meaning without moving implementation, deployment, testability, or evidence-capture details into the logical profile.
