

5.1 Overview

[Go To FX Demo Logical Profile Overview](#)

The FX Demo Logical Profile specialises the Part 2 Distributed Node-Based [Logical Model \(LM\)](#) / [Platform Independent Model \(PIM\)](#) for the [Foreign Exchange Domain](#).

The profile defines the FX-specific logical architecture needed to demonstrate distributed structured-information processing across transaction intake, validation, semantic interpretation, contract state management, cash-flow computation, policy-governed release, audit, provenance, health monitoring, coordination, replay, reconstruction, and oversight consumption.

The FX Demo Logical Profile remains platform-independent. It defines FX logical [Nodes](#), FX logical [Node Roles](#), FX logical [Communication Endpoints](#), FX logical information structures, FX [Runtime Plane](#) participation, FX interaction patterns, FX governance relationships, and FX [Traceability](#) relationships before later parts select implementation technologies or deployment mechanisms.

Figure 5-1 summarises the high-level structure of the FX Demo Logical Profile.

FX Demo Logical Profile

- FX Demo Classification Path
- FX Demo Logical Node Network
- FX Demo Logical Communication Model
- FX Demo Logical Information Model
- FX Demo Logical Runtime Plane Model
- FX Demo Logical Interaction Patterns
- FX Demo Logical Governance Model
- FX Demo Logical Traceability Model
