

5.2 FX Demo Classification Path

[Go To FX Demo Logical Profile Overview](#)

The FX Demo Logical Profile inherits the classification path defined in Part 1.

```
[[fxdemo:99_part_annexes:annex-b-terms-and-definitions:f:finance_ecosphere|Finance Ecosphere]]
└─ [[fxdemo:99_part_annexes:annex-b-terms-and-definitions:m:monetary_ecosystem|Monetary Ecosystem]]
    └─ [[fxdemo:99_part_annexes:annex-b-terms-and-definitions:f:foreign_exchange_domain|Foreign Exchange Domain]]
```

Figure 5-2: Classification path for the FX Demo Logical Profile.

The classification path establishes the business and semantic scope of the FX Demo. It identifies the FX Demo as a [Foreign Exchange Domain](#) profile within the [Monetary Ecosystem](#) and the [Finance Ecosphere](#).

The classification path does not identify any of the following: a runtime domain, deployment namespace, [DDS](#) Domain ID, topic namespace, repository path, container name, pod name, process identifier, or implementation profile. Later implementation and deployment profiles use the classification path for documentation, metadata, [Traceability](#), governance, and [Evidence](#) context, without making it a runtime identifier.
