

13.1 Overview

[Go To FX Demo Logical Governance Model](#)

The FX Demo Logical Governance Model specializes the Part 2 Logical Governance Model for the [Foreign Exchange Domain](#).

FX logical governance controls the definitions, versions, compatibility expectations, change rules, admission rules, policy constraints, and review expectations used by the FX Demo Logical Profile. It helps preserve meaning across FX logical [Nodes](#), FX logical [Communication Endpoints](#), FX logical information structures, FX [Runtime Planes](#), FX interaction patterns, FX [Traceability](#) relationships, and [Evidence](#) expectations.

The FX Demo Logical Governance Model remains platform-independent. It does not prescribe a repository, workflow tool, policy engine, rules engine, access-control product, requirements-management system, ticketing system, approval system, configuration service, runtime registry, or deployment mechanism. Implementation and deployment profiles select governance mechanisms for the selected implementation context.
