

15.2 FX Logical Elements Prepared for Technology Mapping

[Go To Relationship to Implementation Profiles / PSM](#)

The FX Demo Logical Profile prepares FX logical elements for later technology mapping.

An Implementation Profile / [PSM](#) maps FX logical elements such as:

- FX logical [Nodes](#);
- FX logical Node identities;
- FX logical [Node Roles](#);
- FX logical [Communication Endpoints](#);
- FX logical information structures;
- FX [Runtime Plane](#) classifications;
- FX lifecycle states;
- FX logical interaction patterns;
- FX logical governance relationships; and
- FX logical [Traceability](#) relationships.

The implementation profile identifies the selected technology or artefact for each mapping and preserves [Traceability](#) to the FX logical element that the artefact realises.
