

# 15.6 Boundary Between Part 3 and Part 4

## [Go To Relationship to Implementation Profiles / PSM](#)

Part 3 defines the platform-independent FX Demo Logical Profile. Part 4 defines the Phase 0 Implementation Profile / [PSM](#).

Part 3 identifies FX logical [Nodes](#), [Node Roles](#), [Communication Endpoints](#), information structures, [Runtime Plane](#) classifications, interaction patterns, governance relationships, and [Traceability](#) relationships. It does not bind those FX logical elements to implementation technologies, deployment mechanisms, product choices, runtime scripts, generated files, or repository layout.

Part 4 provides the technology-specific mapping while preserving FX logical meaning and [Traceability](#). This boundary allows the FX Demo Logical Profile to remain stable while implementation profiles select or compare different technologies.
