

15.7 Relationship to Phase 0 Implementation Profile

[Go To Relationship to Implementation Profiles / PSM](#)

The Phase 0 Implementation Profile / [PSM](#) provides a single implementation profile for the FX Demo Logical Profile.

The Phase 0 Implementation Profile maps selected FX logical elements to Phase 0 implementation technologies and artefacts. It identifies selected communication technology, data representation mechanism, implementation language, runtime packaging approach, configuration artefacts, generated artefacts, and implementation conventions.

The Phase 0 Implementation Profile belongs in Part 4. It does not belong in this part because this part defines the FX Demo Logical Profile that Part 4 maps to selected implementation technologies.
